TC2 | October 2023 – *present*

CLOUD ARCHITECT

As a member of the consultancy team, I act as a bridge between the operations team and the customer. My responsibilities include conducting regular cost and security reviews of customer AWS environments, and I frequently create and present these reviews.

Additionally, I schedule and plan operations and development tasks, and I actively participate in the delivery process using Terraform / Terragrunt.

I also serve as a subject matter expert for backup solutions, particularly for creating AWS Backup-based solutions for various AWS resource and SAP database backups.
